**Health topic of the month: Stress symptoms: Effects on your body and behaviors**

February 2015

Stress symptoms may be affecting your health, even though you might not realize it. You may think illness is to blame for that nagging headache, your frequent insomnia or your decreased productivity at work. But stress may actually be the culprit.

**Common effects of stress**

Yes, stress symptoms can affect your body, your thoughts and feelings, and your behavior. Being able to recognize common stress symptoms can give you a jump on managing them. Stress that’s left unchecked can contribute to health problems, such as high blood pressure, heart disease, obesity and diabetes.

**Act to manage stress**

If you have stress symptoms, taking steps to manage your stress can have numerous health benefits. Explore stress management strategies, such as: physical activity, relaxation techniques, meditation, yoga, and be sure to get plenty of sleep, eat a balanced diet, and avoid tobacco use and excess caffeine and alcohol intake.

**When to seek help**

If you’re not sure if stress is the cause or if you’ve taken steps to control your stress but your symptoms continue, see your doctor. Your doctor may want to check for other potential causes.
